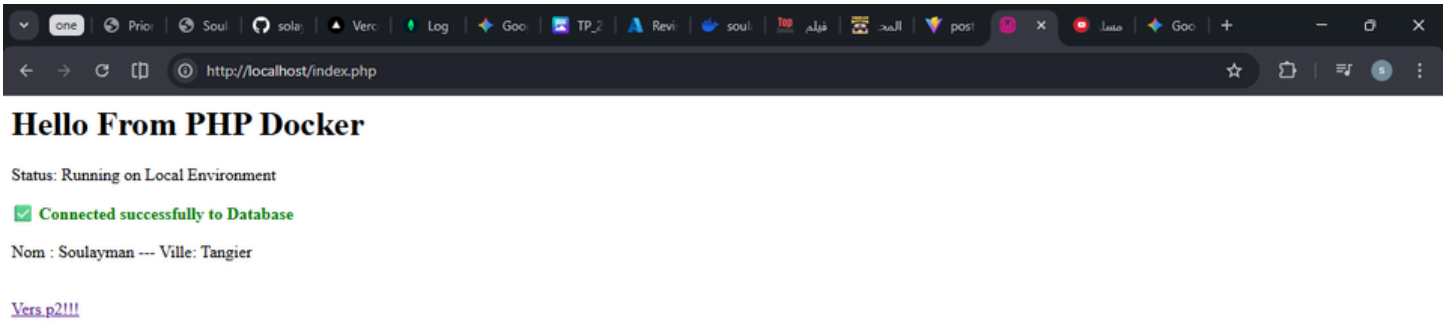
Section 1: Orchestration Locale (Docker Compose)

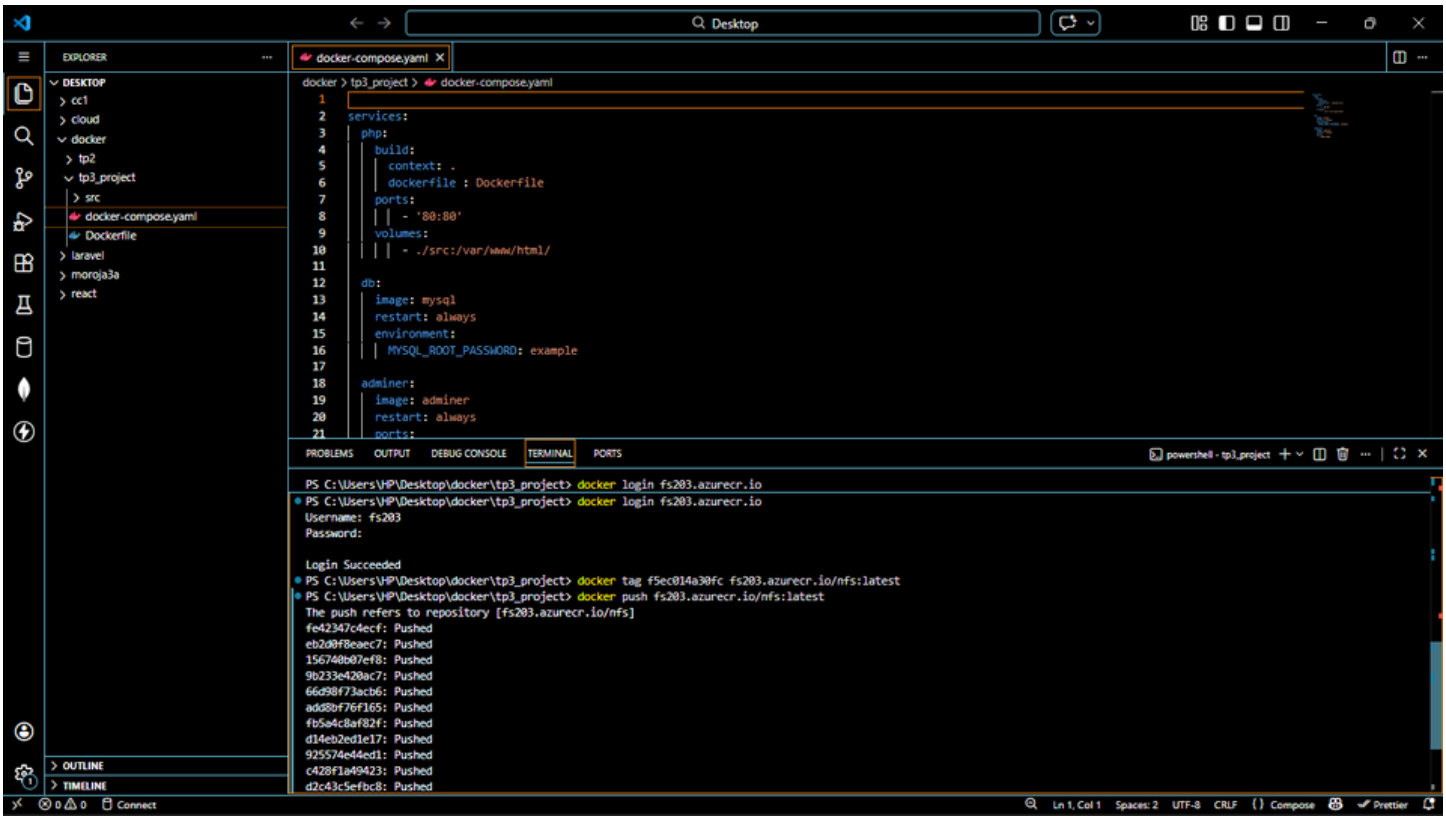
Setup of a multi-container environment (PHP, MySQL, Adminer) using a single YAML configuration.

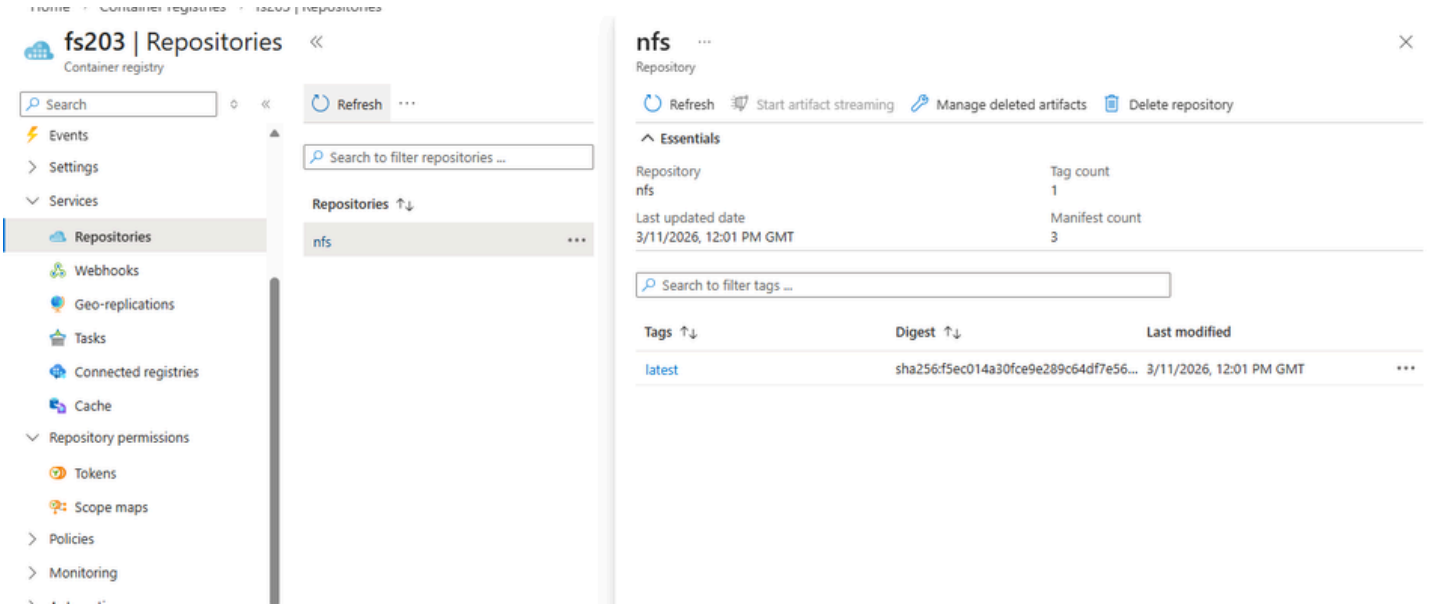
```
#12 resolving provenance for metadata file
#12 DONE 0.1s
[+] up 4/4
 ✓ Image tp3_project-php           Built
 ✓ Container tp3_project-db-1      Running
 ✓ Container tp3_project-adminer-1 Running
 ✓ Container tp3_project-php-1     Recreated
```



Section 2: Stockage Privé (Azure Container Registry)

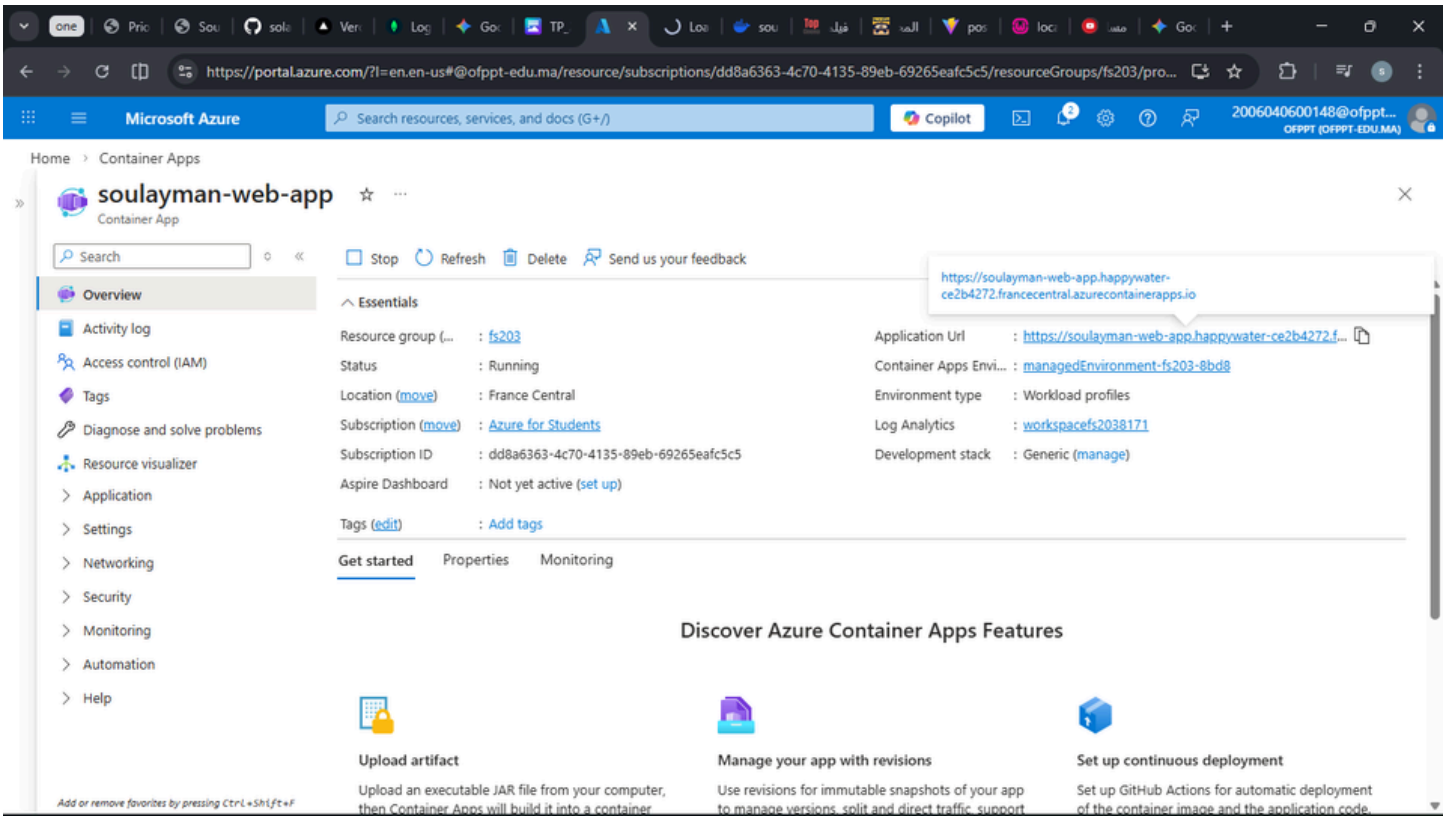
Migration of the local image to a secure, private registry on Azure for better security compared to public Docker Hub.

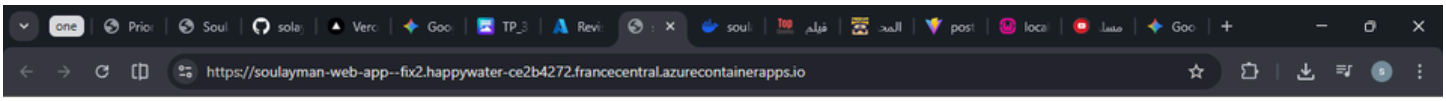




Section 3: Déploiement Public (Azure Container Apps)

Deployment of the web layer to the cloud with an external Ingress for public access





Hello From PHP Docker

Current Mode: Cloud Production (Azure)

ℹ️ Application is live. Database 'db' is currently offline/local.

Everything is working as expected for a web-only deployment.
